

## Micropollutants, Solids and Nutrients Removal from Urban Run-Off

Eilen Arctander Vik, PhD  
Research Manager

Presentation at The European Water Association  
Sustainable Urban Water Management Seminar

at Norwegian Environmental Agency  
Oslo, 17th June 2019

1 | 17TH JUNE 2019 – EWA SEMINAR, AT NEA, OSLO, NORWAY  
SUSTAINABLE URBAN WATER MANAGEMENT

aquateam | COWI

## Content of presentations

- > Which Priority pollutants, Solids and Nutrients?
- > Sources and Levels of Micropollutants in urban surface run-off
- > Micropollutants in road run-off water
- > Decision Support to decide treatment/not?
- > Recommended strategy to decide treatment of run-off water
- > Experiences from tunnel-wash water
- > Example from surface water run-off collection and re-use in California USA
- > Swiss strategy to decide on Micropollutants and treatment for Wastewater treatment plants – new micropollutants
- > Areas for improvement

2 | 17TH JUNE 2019 – EWA SEMINAR, AT NEA, OSLO, NORWAY  
SUSTAINABLE URBAN WATER MANAGEMENT

aquateam | COWI

## Priority Pollutants controlled today?

- > Routinely Hydrocarbons, PAH, PCB and heavy metals
- > Routinely solids (SS)
- > Nutrients (N/P)
- > Sometimes turbidity
- > Sometimes total organic loading (TOC, COD, BOD)
- > Sometimes specific conductivity, salt content and sometimes Cl, SO<sub>4</sub>

## Priority Pollutants to be focused in future and why?

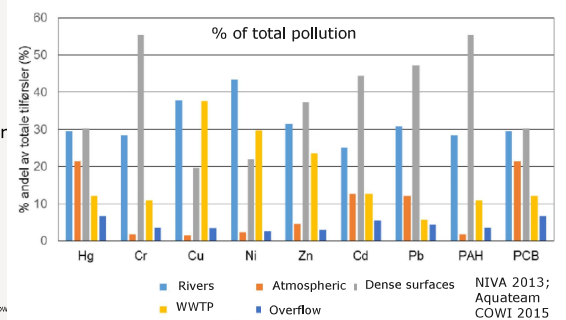

- > Pesticides, Detergents, Plastic components, Pharmaceuticals, PFAS ?
- > Impact on fish catch; -e.g. restrictions on catching cod From Kragerø to Sweden
- > Endangered species and environmental diversity
- > Sustainable development, holistic impacts including energy efficiency
- > Algae growth, oxygen demand, Microplastics control
- > Solids, turbidity, types of particles, Humus, colour

3 | 17TH JUNE 2019 – EWA SEMINAR, AT NEA, OSLO, NORWAY  
SUSTAINABLE URBAN WATER MANAGEMENT

aquateam | COWI

## Priority pollution in surface-runoff? Here: Pollution to inner Oslofjord

- > Rivers main source for Cu, Ni and PAH
- > Dense surfaces main source for Hg, Cr, Zn, Cd, Pb and PCB

4 | 24. NOVEMBER 2017  
PRESENTASJON AQATEAM COWI

## Roads are dominating source from dense surfaces to inner Oslofjord

- > Tyres – defines as Microplastic is a source to Zn and a major source??

5 | 24. NOVEMBER 2017  
PRESENTASJON AQATEAM COWI

aquateam | COWI

## Surface water run-off quality

- > Heavy metals:
  - > Pb (mainly particulates); Zn (50% particulates); Cd (50% particulates); Cu (50% particulates)
- > Organic priority pollutants
  - > PAH (> 90% particulates); PCB (> 90% particulates)
- > Suspended solids
- > Oil-hydrocarbon
- > Nutrients (phosphate, nitrogen)
- > Road salt (NaCl, 100% soluble)

### Heavy metals discharge from surface run-off, 2012

|             |              |
|-------------|--------------|
| • Arsen     | 783 kg/år    |
| • Kvikksølv | 19,6 kg/år   |
| • Bly       | 2 529 kg/år  |
| • Kadmium   | 46 kg/år     |
| • Kobber    | 4709 kg/år   |
| • Krom      | 1482 kg/år   |
| • Nikkel    | 1562 kg/år   |
| • Sink      | 22 393 kg/år |

### Organic PP discharge from surface run-off, 2012

|                 |             |
|-----------------|-------------|
| • Nonylfenoler  | 187 kg      |
| • PAH           | 221 kg/år   |
| • PCB           | 7,7 kg/år   |
| • DEHP (ftalat) | 1 695 kg/år |

6 | 24. NOVEMBER 2017  
PRESENTASJON AQATEAM COWI

aquateam | COWI

## Sources of Micropollutants on roads

- Primary sources of micropollutants from roads
  - Tyres Largest source of microplastics (MP)
  - Asphalt and concrete
  - Brakes
  - Brake fluids
  - Road markings
  - Car coatings
  - Corrosion inhibitors
  - Automotive coolants
  - Fuels, oils and lubricants
  - Others

7 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Measured concentrations in leachate of artificial tyres in distilled water and acid rain and in run-off and snow

- BT and MeSBT found in Rainfall events and Snow in concentrations from 3-70 µg/l
- MBT, Aniline and DCHA found in snow in concentrations from 4-30 and 40-50 µg/l, accordingly.

| Chemical  | Short name | Cas-no             | Distilled water                   |   | "Acid rain" (pH=4)                |   |
|---|------------|--------------------|-----------------------------------|---|-----------------------------------|---|
|   |            |                    | Average (SD) (µg/L) <sup>1)</sup> | Detection limit (µg/L) # below DL <sup>2)</sup> | Average (SD) (µg/L) <sup>1)</sup> | Detection limit (µg/L) # below DL <sup>2)</sup> |
| Mercaptobenzothiazol                                | MBT        | 149-30-4           | 414 (334)                         | 0.5 (9/14)                                      | 144 (181)                         | 0.5 (5/11)                                      |
| Benzothiazol  | BT         | 95-16-9            | 550 (357)                         |   | 402 (336)                         |   |
| Methylbenzothiazol                                  | MeBT       | 120-75-2           | 254                               | 2 (13/14)                                       | 83                                | 2 (12/13)                                       |
| 2-Methylthio benzothiazole                          | MeSBT      | 615-22-5           | 87 (72)                           |   | 37 (28)                           |   |
| N-Isopropyl-N'-phenyl-1,4-phenylenediamine          | IPPD       | 101-72-2           | 33 (10)                           | 15 (5/13)                                       | 94 (63)                           | 15 (5/13)                                       |
| N-(1,3-dimethylbutyl)-N-phenyl-1,4-phenylenediamine | 6PPD       | 793-24-8           | 40 (29)                           | 10 (5/14)                                       | 1685 (3147)                       | 10 (3/12)                                       |
| N,N-dimethyl- and N,N-diphenyl-pathylenediamine     | DFPD/ D'PD | 74-31-7 / 620-91-7 |                                   | 80 (14/14)                                      |                                   | 80 (13/13)                                      |
| Aniline   |            | 62-53-3            | 14 (14)                           |   | 13 (14)                           |   |
| Dicyclohexylamine                                   | DCHA       | 101-83-7           | 134 (173)                         |   | 185 (218)                         |   |
| Cyclohexylamine                                     | CHA        | 108-91-8           | 543 (877)                         | 1 (4/14)  | 434 (1017)                        | 1 (4/13)  |

8 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

<sup>1)</sup> This column shows the average concentration. The standard deviation (SD) is shown in brackets.  
<sup>2)</sup> This column shows the detection limit (DL) concentration. The number of samples below the detection limit compared to the total number of samples in shown in brackets.

## Measured in environmental media

- Tyres
  - Challenge: different chemicals are measured in different studies
  - BT measured in all
  - PAH levels reduced by 10 due to EU regulation
- Asphalt- much less than tyres
- MP added to asphalt; elastomers, plastomers, natural rubber
- PAH low levels
- Other organic micropollutants also included

| Environmental medium                    | BT<br>Benzothiazole<br>Casno 95-16-9 | OHBT<br>Hydroxybenzothiazole<br>Casno 931-34-9 | 24MoBT<br>2-Morpholinobenzothiazole<br>Casno 4225-26-7 |
|---|--------------------------------------|--|--|
| Leaching from CRM in 5 x 24h (mg/kg)    | 100                                  | 36   | 20   |

## Recommendation to measure a variety of organic micropollutants in road run-off

CEDR Transnational Road Research Programme. Call 2016-Environmentally Sustainable roads: Surface and Groundwater quality. MICROPROOF; Micropollutants in Road Run-Off; Feb 2018

- Tyres: Benzothiazoles (benzothiazole, mercaptobenzothiazole, benzothiazolone, hydroxybenzothiazole, benzothiazole-2-sulfonate), amines (cyclohexylamine, dicyclohexylamine, hydroxydiphenylamine, aminodiphenylamine), aniline
- Brakes and brake fluid: polyglycol ethers, Boric-acid-ester, Tributylphosphate, Triethanolamine
- Car coatings: hexa(methoxymethyl)melamine, nonylphenol ethoxylates, octylphenoethoxylates, bisphenol A
- Coolants: benzothiazole, tolyltriazole, mercapto benzothiazole, Sodium borate, Sodium Boric acid
- Other: diisodecyl phthalate, di(2-ethylhexyl)phthalate

10 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## We need a Decision Support System for selecting treatment for PP in road run-off water

Example

11 | 17TH JUNE 2019 - EHA SEMINAR, AT NINA, OSLO, NORWAY  
SUSTAINABLE URBAN WATER MANAGEMENT

aquateam | COWI

## Recommended focus on treating Surface Run-Off water

- Road in tunnel, always treatment
- Based on traffic loading (ÅDT= Yearly daily traffic) + medium and high vulnerability recipients

12 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Example: Tunnel Wash-water

- = Road Run-Off in «high concentration»:
  - Detergents complexing Cu and Zn
  - Toxic to bacteria and «animals» in local collection basins

13 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

## Tunnel Wash-water; Recommended Water treatment

Based on test results from R&D laboratory studies

- > Sand Traps
- > Sedimentation Basin (4-5 weeks)
- > Filtration prior to discharge to recipient

14 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Tunnel wash-water quality example

| Tunnel Wash-water Nordbyttunnelen | OIW mg/l | PAH µg/l | Tot-P mg/l | Tot-N mg/l | TOC mg/l | SS mg/l | Emerging pollutants:  |
|-----------------------------------|----------|----------|------------|------------|----------|---------|-----------------------|
| Summer (2014)                     | 3,2      | 5        | 5,6        | 11,5       | 155      | 544     | • Micro-Plastics (MP) |
| Winter (2015)                     | 27       | 120      | 35         | 15         | 654      | 28000   | • New PP              |

m | COWI

## Results lab tests

- > Sedimentation important
- > Anaerobic degradation important to reduce COD (organic detergent) and form sulphide binding Zn and Cu
- > Small solids amount

16 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Used treatment concepts for surface run-off

- > Sand traps
- > Rainbeds
- > Slow infiltration and
  - Adsorption to iron
  - Leaves
  - Anaerobic degradation
- > Collection and treatment of snow

Rainbed to treat contaminated surface run-off

Oslo kommune (2016) Regioled som renseanlegg for forurenset vann. Faktaark om blågrønne løsninger

aquateam | COWI

17 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

## Treatment of urban surface run-off

- > Sand traps efficient for removing micropollutants (>> 50 %)
- > Cleaning roads efficient (not documented removal rate)
- > When sand traps are filled- poor function
- > Cleaning of sand traps when 50 % of storage volume is filled → 40-50 % of pollutants in surface run-off can be removed
  - Norway has 100 000-200 000 Sand traps
- > Collection and treatment of snow – important!!

18 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## California example: Treatment for PP, N/P, solids and micropollutants

Santa Monica Urban Runoff Recovery Facility; SMURRF 2013;

Only partial water soluble PP removed

19 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Swizz strategy to manage micropollutants in sewage

- > **Background;** Fishnet project showed decline in fish yield in Switzerland. National R&D program «endocrine disruptors showed wastewater (WW) main point source to pollution of surface water.
- > **Objective:** Evaluate installation of additional treatment steps for WWTP
- > **Result (2006-2011):**
  - > > 1 ng/EE2/l → lack of male fish
  - > Species diversity reduced by WWTP discharges
  - > Concentration of 11 micropollutants; e.g. fragrances, flame retardants (PFAS), Pharmaceuticals, Pesticides, Benzotriazol
  - > Focus on removal of problematic substances; very difficult (Pharmaceuticals) or impossible (natural estrogens)
  - > Identified treatment technologies; Ozone + SF; GAC; Ozonr + GAC (BAC)

20 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Existing Treatment and impact on removing micropollutants

Biological treatment and impact on micropollutants removal;

- > MBR, Biofilter; Measuring in plants: most compounds comparable treatment, and only partially removed.
- > Lab tests and modelling; Model fits, but not for all compounds
- > New technology needed!!

21 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Swizz strategy to manage micropollutants in sewage

**Legislation scope:**

- > Load reduction on D/S water (recipients)
- > Protect sensitive waters (ecotoxicology)
- > Protect drinking water (DW) resources (precaution)
- > **Source control;** Regulating specific compound (Pesticides)
- > **WWTP upgrading:** Cost < 20 €/pe/year; until 2040: 120-130 WWTPs (50% WW)
- > > 80 000 pe (load reduction)
- > > 24 000 pe discharging into lakes (DW protection)
- > > 8 000 pe with > 10% dilution in receiving water (protect the environment)
- > Exemptions

22 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Treatment technology for removing micropollutants

- > Sorption to sludge: relevant for a few compounds
- > Degradation achieves only partial removal; transformation products of similar structure often formed: Does it eliminate detoxification? Wetland achieves little Micropollutants removal
- > Spots for advanced treatment was identified
- > Additional steps to increase removal of PP > 80 % identified; lab and pilot tests
- > Currently 9 full scale plants in operation
  - > 5 steps with with GAC
  - > 4 steps with ozone followed by sand filtration
  - > Bioactive granular activated carbon (BAC), which is combined with Ozone has been identified as an interesting alternative

23 | 24. NOVEMBER 2017  
PRESENTASJON AQUATEAM COWI

aquateam | COWI

## Uncertainty and areas for improvement.

- > Do we include the right Priority Pollutants
- > Naturally Organic Matter (NOM) is a vehicle transporting heavy metals and priority pollutants; The Oslofjord is brown after heavy/long-lasting rainfall; NOM a vacuum cleaner for Priority Pollutants. Colour in surface water increased from 20 to 60 mg Pt/L (from 1995-2015) in many drinking water sources.
- > Solids Guidelines developed for naturally eroded material, not for blasted masses; EIFAC; 1982

| Suspendert stoff(mg/l) | Effekter på fisket                                   |
|------------------------|--|
| < 25 mg/l              | Ingen skadelig effekt                                |
| 25-80 mg/l             | Godt til middels godt fiske. Noe redusert avkastning |
| 80-400 mg/l            | Betydelig redusert fiske                             |
| > 400 mg/l             | Meget dårlig fiske, sterkt reduser. avkastning       |
