SWARM COURSE DESCRIPTION

with special reference to learning outcomes

Course description:
Engineering geodesy is an application-oriented science, whose research questions often arise from observed phenomena or from unsolved practical problems. Consequently, this contribution covers aspects of both scientifically as well as practically oriented engineering geodesy, in case such a separation is possible or necessary at all. After passing this exam, the student will be able to: 1. Know the methods of projecting the earth's surface on the projection plane. 2. Knows the methods and instruments for making a topographic base. 3. Requires special conditions for the content and accuracy of the topographic background. 4. Knows the way of using topographic base in the design of buildings. 5. Knows the methods of transferring the project to the field and making the Marking Project. 6. Can contract and control the construction of the topographic base and the transfer of the project to the field. 7. Understands the manner of creating and maintaining the real estate cadastre as a single record of ownership.
